Construction quality

The proposed scope of work entails the creative reuse and structural enhancement of existing mild steel (MS) frames representing various forms such as cartoon figures, floral motifs, and other thematic objects previously utilized in the Flower Show 2025. These MS structures, presently in ready condition, shall undergo thorough surface preparation, which includes sandpapering to remove dust, rust, and surface irregularities. A suitable anti-corrosive primer or rust-inhibiting coat shall then be uniformly applied to ensure long-term durability and to enhance bonding with subsequent materials. The restored MS frames will serve as the foundational armature for further work.

On this prepped framework, chicken mesh of appropriate gauge shall be securely fixed using tying wire or tack welding, ensuring a firm base to receive the cladding materials. A fiberglass-reinforced plastic (FRP) layer of approximately 4 to 5 mm thickness shall then be meticulously applied. This process includes the sequential application of a base jalcoat followed by the lamination of emulsion strand mat saturated with an appropriate resin blend. The resin shall be catalyzed using cobalt accelerator and MEKP hardener in precise ratios to ensure controlled curing. This lamination process may require layering in phases, with adequate curing time provided between coats to avoid brittleness and to achieve the intended strength and finish. All application processes shall be carried out with due consideration to environmental conditions to prevent delaminating or improper setting.

Upon curing of the FRP surface, the detailing phase shall be initiated. Skilled artisans, experienced in sculpture and surface carving, shall shape the fiberglass cladding to recreate intricate features—such as facial expressions, folds in petals, object-specific contours, and character-specific nuances. Fine tools, including mini-grinders and hand chisels, will be used with utmost care to refine surfaces and prepare them for final finishing. Once satisfied with the contours and object definition, trained artists shall proceed with color treatment using high-quality, fade-resistant paints to impart a realistic appearance. The color palette and techniques shall be finalized in coordination with the designated authorities or subject experts to maintain visual integrity and thematic coherence. A final UV-

resistant clear coat shall be applied uniformly to preserve the vibrancy of the artwork and to safeguard it against environmental degradation.

All workmanship shall be carried out in line with best industry practices, ensuring precision, safety, and aesthetic finesse at each stage. Periodic quality inspections shall be conducted during fabrication, cladding, and painting to ensure compliance with the approved design intent and material specifications. The final installation shall be weather-resistant, secure, and visually striking, creating an immersive and enduring experience for public display.
